NaviClean™
Powered by ADEY™
Installation and servicing instructions
NaviClean’s in-line design and 360° rotational valves provide multiple installation options for both vertical and horizontal pipework. This ensures greater flexibility within the tightest working environments.
NaviClean™ has been developed by the industry leading and multi-award winning company that pioneered magnetic filtration. ADEY’s filters protect over four million heating systems throughout Europe. They have been expertly designed to maximise the capture of magnetite. Engineered to actively trap virtually all circulating debris, it never stops delivering the very best protection.

The x-treme performance dual-action filter can be installed anywhere on the main circuit. However, to achieve the best level of protection for the boiler or baseboard, it is recommended that NaviClean is installed after the last heating zone and before the boiler.

In both diagrams, position A is best practice, while B is suitable.

Note: We firmly recommend that NaviClean is installed and serviced by a qualified professional.

**CAUTION:**

- Naviclean filter contains a strong magnet. Keep away from all electrical devices, bank cards and other magnetic devices.
- Naviclean filter contains a strong magnet. Caution should be taken at all times when handling if you have a pacemaker fitted.
- Naviclean filter is a pressurized device. Always release pressure before servicing.
- Unit may be hot in operation. Handle with care.
