

NWP500 Series

NEW NWP500 Heat Pump Water Heaters

New NWP500 Heat Pump Water Heaters with stainless steel tank

Versatile, energy-saving Navien heat pump technology and high performance corrosion-resistant components

The Navien NWP500, a highly efficient heat pump water heater, is designed to perform optimally in all climates. It matches the size of standard floor-standing tank water heaters, fits easily in compact spaces, and features a durable, corrosion-resistant stainless steel tank paired with aluminum coils.

No anodes

The NWP500 features a corrosion-resistant design

that eliminates the need for sacrificial anodes used in enamel coated steel tanks, reducing maintenance requirements and ensuring long-lasting performance.

Designed for today's energy efficiency, environmental

Smart

The NWP500 utilizes advanced heat pump technology to extract heat from the surrounding air. As the fan moves air across the upper coil, heat is transferred to the refrigerant which travels down and exchanges heat into the tank. The system works similar to a refrigerator, only in reverse, and is much more efficient than traditional electric tank water heaters. It also has intuitive controls, built-in WiFi remote control, direct heating elements for faster recovery when needed, or as optional, or back-up heating, making the NWP500 a very intelligent choice.

Strong

The NWP500 has an anode-free, corrosion-resistant stainless steel tank, aluminum coils, coated aluminum evaporator coils, and a heavy-duty compressor for unmatched durability. It also has a tough, smudge-proof matte gray pre-coated finish, which is easy to clean.

Green

The NWP500 uses electricity to move heat from one place to another without using fuel to heat, reducing greenhouse gases and energy usage, which is better for the environment.

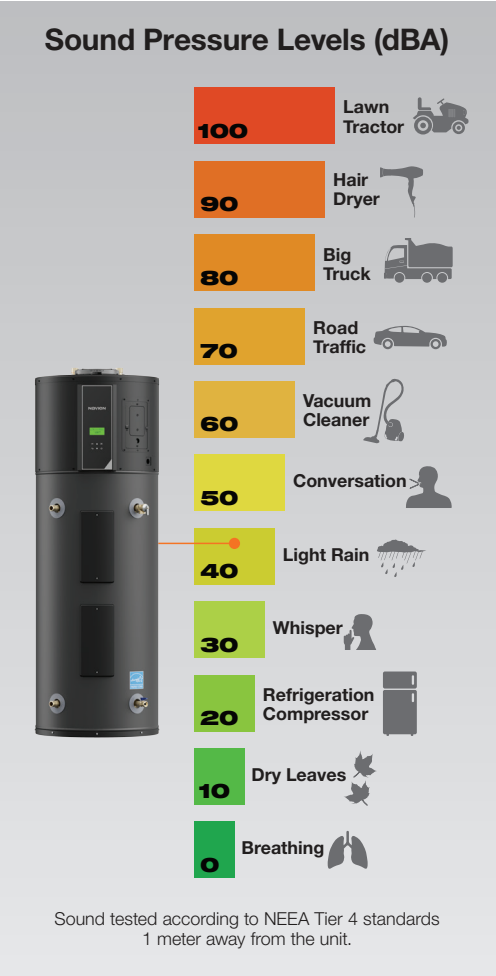

homeowners who value sustainability, and overall quality

Quiet

The NWP500 operates on sound levels lower than 45 dBA, comparable to light rain, normal talking or washing your hands.

Rebates

The NWP500 is an Energy Star rated product and may qualify for local and/or state rebates.

Easy on utility costs

When compared to a standard electric resistant water heater, the NWP500 can substantially lower homeowners monthly energy bills.

Flexibility

Your Navien contractor can install the NWP500 in tight areas with zero clearance on sides and back, and optional top and side water connections.

Also, they can be installed in attics, utility rooms, closets, garages and basements, making the NWP500 the perfect fit for any home.

Enjoy hot water comfort
in warm and cool climates

Confined, or small space cold climate installations can use indoor air for intake, and use exhaust ductwork to remove cold air from heated area in the home.

Confined, or small space warm climate installations can use intake ductwork for hot outdoor air, and the cold output air can help cool installation areas.

Cost-saving control at your fingertips

Five operation modes for maximum performance and efficiency:

- Energy Saver • Heat Pump
- High Demand • Electric • Vacation

The NWP500 Heat Pump Water Heater is a great choice for saving energy and utility costs for your new, old, large or small home

Lower your utility bills and save energy by switching from a traditional electric water heater to a Navien NWP500.
